

# MORRILL'S

Saw Sets, Bench Stops, Punches, Cutting Pliers, and Seal Presses.

REGISTERED  
U. S. PATENT  
No. 30572.

REGISTERED  
U. S. PATENT  
No. 30572.

This Trade Mark is stamped on all Saw Sets and other Hardware Specialties of my make.

## MORRILL'S No. 1 IMPROVED.

Known as the New No. 1 Saw Set.

For Hand, Band and Jig Saws, from the widest made down to  $\frac{1}{4}$  inch. The Sets are too well known for me to enlarge on them.

## MORRILL'S MASTER-PIECE No. 95.

The revolving anvil with indicator sub-divided and marked with figures, the figures showing the number of teeth to the inch in the saw to be set; for example, if the saw has four teeth to the inch, turn the anvil until the figure 4 comes up directly in front of the plunger, and so on.

## MORRILL'S No. 11 SAW SET.

A Superior Hand Saw Set perfect in its construction and unerring in its operation; will set any hand-saw from 1-16 inch thick down to the thinnest made, and from the coarsest to the finest in general use.

## MORRILL'S 3 and 4 SAW SETS.

No. 3. Cross Cut and Circular, single tooth, from 14 to 20 gauge. No. 4. Cross Cut M and Champion Tooth, from 14 to 20 gauge.

## MORRILL'S No. 5 SAW SET.

15 Inches in Length.

For Timber and Board Saws, from 6 to 14 gauge. The size of the saw in circumference makes no difference. These sets are made strong, accurate and durable. Saw teeth should never be twisted, but set at right angles to their points, as shown above.

## MORRILL'S PERFECTED BENCH STOP.

No wood worker can afford to do without a reliable Bench Stop or hook, as it is sometimes called. The end that the screw is in should always be toward the operator. The spindle and working plate is of WROUGHT STEEL. The body is of malleable iron, rendering it the most durable and useful Bench Stop ever put on the market.

Write for Catalogue and obtain a complete list of specialties from which the few cuts above have been chosen.
